

Void Bowels - Vinay Khemlani, Hershey Harpaldas, Greg Ghahramani, Kyle Burkey

## Statement of Work

*The goal of this project was to design and build a marketable Android “App”.*

This project meets the objectives set out. The user-interface is intuitive and is robust to different behavior. It is visually pleasing with intent to give the user a similar experience of using the BU student link. Our code is efficient and provides results to the user within seconds. Our application is also very marketable as it solves a problem for many students at BU.

*We, the Void Bowels, consent that this project was done to the best of ability and we all contributed to the project with the assigned roles.*

### Harshit Harpaldas

*Project Lead/Documentation Manager*

Oversaw meetings and organized documentation of work. Also organized video and powerpoint.

### Vinay Khemlani

*Processing Designer*

Wrote all back-end java code and assisted with GUI design to connect to one seamless application.

### Kyle Burkey

*Interface Designer*

Connect all components into one project. Setting up a version control system for maintaining all code and documentation used by the project and testing of application.

### Gregory Ghahramani

*GUI Designer*

Design of user interface and worked with processing designer to connect to back-end.
